Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions

This document describes the SAP Ariba Contracts integration with Icertis Contract Intelligence for SAP Ariba solutions, provides instructions for setting up the integration, and explains the business process flows that are supported by this integration.

This guide applies to:

- SAP Ariba Contracts
- SAP Ariba Sourcing
- SAP Ariba Strategic Sourcing Suite
- SAP Strategic Procurement
- SAP Ariba connector for Icertis
- Icertis Contract Intelligence platform

SAP Ariba Contracts Integration with Icertis Contract Intelligence for SAP Ariba Solutions

Buyers using SAP Ariba Contracts, SAP Ariba Contracts integrated with SAP Ariba Sourcing, or SAP Ariba Strategic Sourcing Suite can choose to integrate their SAP Ariba Contracts instance with Icertis Contract Intelligence (ICI) for SAP Ariba solutions to leverage the intelligent and flexible contract authoring capabilities offered by ICI. The intelligent contract authoring capabilities offered by ICI include self-service contract management, rule-based contract authoring, dynamic assembly of clauses and documents, and advanced negotiation and collaboration features.

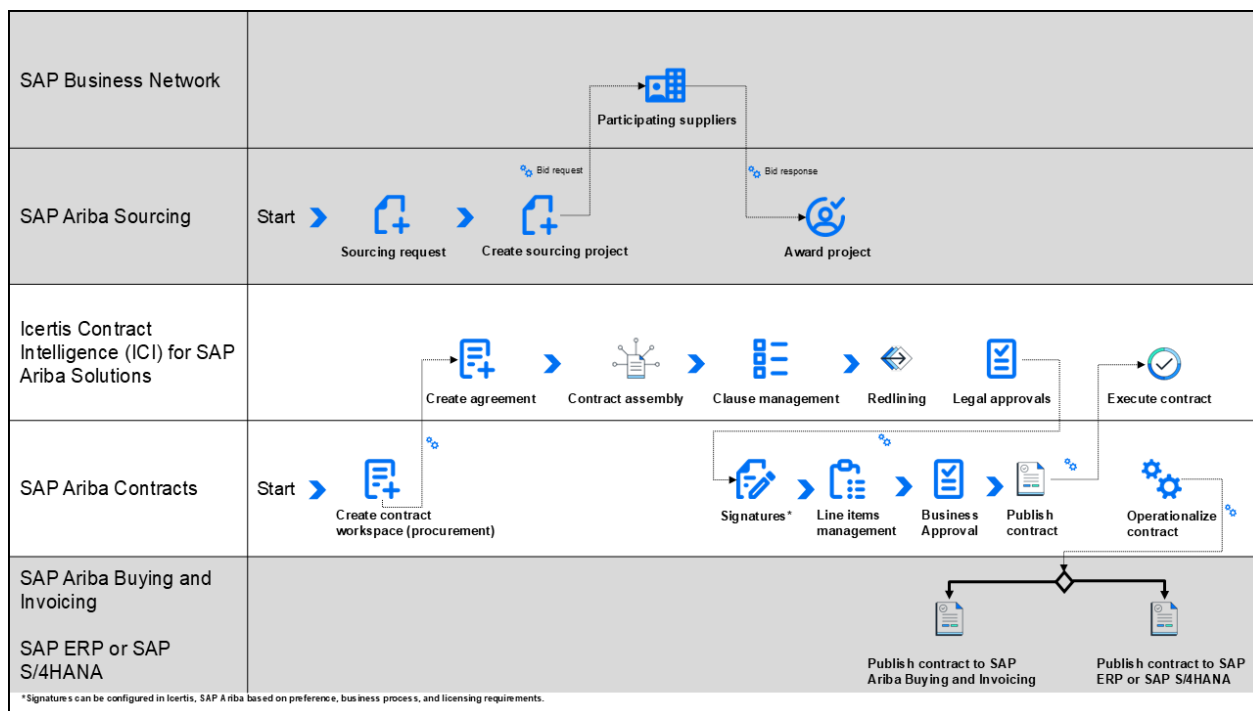

There are two options available to buyers for integrating with ICI:

1. Integrate SAP Ariba Contracts with ICI, to manage some of the contract lifecycle tasks in ICI.
2. Integrate SAP Ariba Contracts, which is integrated with SAP Ariba Sourcing, with ICI, to manage all the contract lifecycle tasks in ICI.

The following illustration shows the end-to-end workflow of a contract workspace (procurement) and the different tasks shared between SAP Ariba Contracts and ICI, when buyers have chosen to integrate their SAP Ariba Contracts with ICI to manage some of the contract lifecycle tasks in ICI such as contract assembly and authoring, clause and template management, redlining, and so on.

ⓘ Note

The areas with a gray background show optional steps that involve interactions with applications (SAP Business Network, SAP Ariba Sourcing, SAP Ariba Buying and Invoicing, or an ERP system such as SAP ERP, SAP S/4HANA, or SAP S/4HANA Cloud Public Edition) whose subscription is not necessary for integration with ICI. If you have a valid subscription to any of these applications, you can perform the corresponding tasks outlined in the workflow.

As shown in the preceding illustration, the tasks that are delegated to Icertis include:

- Assembly of contractual documents like the Main Agreement, contract addenda, and other standard project documents.
- Clause and template management.
- Review and negotiation of the Main Agreement document with the involved participants.
- Signature and approval of the stipulated contract terms and conditions, and so on.

The illustration describes the end-to-end workflow of a new contract workspace (procurement). Buyer users may choose to amend a published contract workspace in SAP Ariba Contracts and choose to initiate authoring and perform the subsequent tasks in Icertis.

We recommended that you perform these tasks in Icertis as many of these tasks are disabled in SAP Ariba Contracts when you enable the integration between SAP Ariba Contracts and ICI. For a complete list of restrictions, see [Restrictions for the SAP Ariba Contracts Integration with Icertis Contract Intelligence for SAP Ariba Solutions \[page 12\]](#).

Benefits of Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions

The integration between SAP Ariba Contracts and Icertis Contract Intelligence for SAP Ariba solutions enables you to access advanced contract management capabilities offered by the Icertis Contract Intelligence (ICI) platform. The integration between SAP Ariba Contracts and SAP Ariba Contract Intelligence by Icertis enables you to access advanced contract management capabilities offered by Icertis.

Some of the key features offered by ICI are:

- Rule-based contract authoring with dynamic assembly of clauses and documents.

- Well-defined contract review and negotiation workflow with in-built support for Microsoft Word Online to edit and redline documents from any location.
- Microsoft Teams support for easy collaboration with team members across different locations.
- An intuitive user interface that's configurable as per user requirement.
- Support for automation such as the ability to configure scheduled jobs to perform predefined tasks without user intervention.

Some of the key capabilities that are available with this integration are:

- Access agreements in ICI while selecting a contract from sourcing awards*.
For more information, refer to [Accessing Icertis Agreements While Selecting a Contract to Add Line Items from Sourcing Awards \[page 28\]](#).
- Access agreements in ICI while selecting a contract from guided sourcing awards*.
For more information, refer to [Accessing Icertis Agreements in Guided Sourcing While Selecting a Contract to Add Line Items from Sourcing Awards \[page 30\]](#).
- Delete or deactivate line items in a Contract Line Items Document (CLID) using an Excel file.
For more information, refer to [Deleting or Deactivating Line Items in a Contract Line Items Document Using Excel Import \[page 31\]](#).
- Import deactivated line items from an integrated ERP system to a contract workspace using an Excel file.
For more information, refer to [Importing Deactivated Line Items From an Integrated ERP System to a Contract Workspace Using Excel Import \[page 33\]](#).
- Create agreements in ICI from guided sourcing events*.
For more information, refer to [Creating an Agreement in Icertis Contract Intelligence for SAP Ariba Solutions from a Sourcing Event \[page 38\]](#).
- Add awarded line items from a guided sourcing event to an existing agreement in ICI*.
For more information, refer to [Adding Awarded Line Items from a Sourcing Event to an Existing Agreement in Icertis Contract Intelligence for SAP Ariba Solutions \[page 40\]](#).
- Pre-Award negotiation in guided sourcing events*.
For more information, refer to [Pre-Award Negotiation in Guided Sourcing](#).

*Available only if you have chosen to integrate SAP Ariba Contracts with ICI to manage all the contract lifecycle tasks in ICI.

Getting Started with Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions

The following topics outline the prerequisites and restrictions that apply to the integration between SAP Ariba Contracts and Icertis Contract Intelligence for SAP Ariba solutions.

[Prerequisites for Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions \[page 7\]](#)

[Restrictions for the SAP Ariba Contracts Integration with Icertis Contract Intelligence for SAP Ariba Solutions \[page 12\]](#)

Prerequisites for Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions

Prerequisites for SAP Ariba Contracts

The following prerequisites must be fulfilled before you begin with the integration process. Please contact SAP Support for assistance.

1. Ensure that you have a valid licence for SAP Ariba Contracts or SAP Ariba Strategic Sourcing Suite. If you have chosen to integrate your SAP Ariba Contracts instance with ICI to manage all the contract lifecycle tasks in ICI, then your SAP Ariba Contracts instance must also be integrated with SAP Ariba Sourcing.
2. Ensure that you have a valid subscription for Icertis Contracts Intelligence for SAP Ariba solutions and any additional Icertis capabilities that you want to use in the integrated solution.
3. Set up the user profiles. For creating and setting up user profiles, see [Adding Users](#).
4. Set up user authentication and single sign-on using the SAP Cloud Identity Services. For more information, see [User Authentication and Single Sign-On Using the SAP Cloud Identity Services – Identity Authentication Service](#).
5. Import the regional data to populate the list of qualified and preferred suppliers based on region. For more information about defining regions, see [Region Definition for Imported Data](#).
6. Define supplier users and organizations. For more information, see [Supplier Users and Organizations Definition](#).
7. Ensure that the supplier data is available in SAP Ariba's master data service. This requires that your site is configured to support master data native integration. To review the existing configuration and for more information, see [Integration to Support Master Data Native Integration](#).
8. Configure the various fields (standard and custom) that will be a part of the SAP Ariba Contracts workspace.
9. Define the commodity codes to associate them with supplier organizations. For more information about managing commodity codes, see [Commodity Code Management](#).
10. Import other master data such as department, products, units of measure, and more. For information about the different master data to be import, see [Importing Your Master Data](#).
11. Import other master data such as department, products, units of measure, and more. For information about the different master data to be import, see [Importing Your Master Data](#).
12. Template administrators must modify existing contract workspace (procurement) templates or create new templates and add a user group named **ICI Users**. This group contains participants added by buyer users to a contract workspace (procurement). Members of this group can perform tasks in ICI.

Note

Template administrators must note the IDs of the templates that contain the **ICI Users** user group and share them with ICI administrators for template management in ICI.

13. You must be the contract owner (Primary Owner) or a user who has been granted permission by the contract owner (Secondary Owner) to access the ICI interface.
14. Ensure that you have implemented the following SAP Ariba APIs to enable communication between ICI and SAP Ariba Contracts. These APIs are available on the [SAP Developer Portal](#) .

API Name	End Point	Description	Additional Information
Project Document Management API	GET / projectDocuments	Retrieves the list of documents that match the search criteria you specify. You can search for documents based on one or more of conditions such as the document title, document type, and the last modified date.	Identifying and Downloading Project Documents by Using the Project Document Management API
	GET / projectDocuments/ documentId	Retrieves the list of documents, along with the metadata, associated with the specified project ID or folder ID. If a document ID is given in the query, the query retrieves the associated metadata. The metadata contains ID, name, size, folder, version, owner, type, dates the document was created and was last modified, signed document ID, and so on.	Identifying and Downloading Project Documents by Using the Project Document Management API
	GET / projectDocuments/ <i>documentId</i> /files	Downloads the document that matches the specified <i>documentId</i>	Identifying and Downloading Project Documents by Using the Project Document Management API
	POST / projectDocuments/ {parentId}	Creates folders or project documents of type Standard Document, Main Agreement, and Contract Addendum.	Creating a Document or Folder by Using the Project Document Management Creation API
	PUT / projectDocuments/ {documentId}	Updates folders and project documents of type Standard Document, Main Agreement, and Contract Addendum in a Contract Workspace (Procurement).	Updating Documents by Using the Project Document Management Modification API

API Name	End Point	Description	Additional Information
	POST / projectDocuments/ documentID/state	Updates the state of documents such as standard documents, Main Agreement, and contract addendum in a contract workspace. For a Main Agreement or a contract addendum document, you can change the state from draft to publish, publish to finalize, and from finalize to draft. For standard documents, you can change the state from draft to publish.	Changing the State of a Document in a Contract Workspace
Contract Workspace Management APIs	GET / contractWorkspaces	Gets contract workspaces matching the provided criteria.	Searching for Contract Workspaces Using the Contract Workspace Retrieval API
	GET / contractWorkspaces/ \$contractId	Returns the single contract workspace matching the provided contract workspace ID.	Getting Contract Workspaces Matching the Provided ID Using the Contract Workspace Retrieval API
	POST / contractworkspaces	Creates a contract workspace using the ContractWorkspace Model Object that contains Contract Header fields metadata.	Creating Contract Workspaces Using the Contract Workspace Modification API
	POST / contractWorkspaces/ {contractId}/state	Updates the status of a published contract workspace (procurement) to DraftAmendment (action = amend) so that you can modify the contract workspace. You can use the same endpoint with the action parameter set to complete amendment to trigger publishing for Administrative or PriceUpdate amendments.	Changing the State of Procurement Contract Workspace Using the Contract Workspace Modification API
	PATCH / contractworkspaces	Updates an existing contract workspace by using the provided contract workspace fields for updating the contract.	Updating Contract Workspaces Using the Contract Workspace Modification API

API Name	End Point	Description	Additional Information
	GET / contractWorkspaces/ {contractId}/ contractLineItemDoc uments/{documentId}	Retrieves the document and the metadata associated with the specified document ID and the contract ID. The metadata includes all the standard fields, custom fields, task IDs, task names, line item types (including hierarchical line items and line items with pricing conditions), and translations of lines items in the CLID. The API also retrieves all the versions of the CLID excluding the version that is in the Not Created status.	Getting the Metadata of a Contract Line Items Document Using the Contract Line Items Document Retrieval API
	GET / contractWorkspaces/ {contractId}/ contractLineItemDoc uments/ {documentId}/files	Downloads the CLID corresponding to the specified document ID and contract workspace ID.	Downloading a Contract Line Items Document Using the Contract Line Items Document Download API
	POST / contractWorkspaces/ {contractId}/ contractLineItemDoc uments	Creates a CLID in the specified contract workspace.	Creating a Contract Line Items Document in a Contract Workspace using the Contract Line Items Document Management API
	PATCH / contractWorkspaces/ {contractId}/ contractLineItemDoc uments/{id}	Modifies the attributes of an existing CLID in the specified contract workspace.	Updating a Contract Line Items Document Using the Contract Line Items Document Management API
	POST / contractWorkspaces/ {contractId}/ contractLineItemDoc uments/ {documentId}/files	Imports the line item data to the CLID of a contract workspace.	Importing Line Items to a Contract Line Items Document Using the Contract Line Items Import API
	DELETE / contractWorkspaces/ {contractId}	Deletes a contract workspace in SAP Ariba Contracts.	Deleting a Contract Workspace Using the Contract Workspace Delete API

API Name	End Point	Description	Additional Information
	POST /contractWorkspaces/{contractId}/contractLineItemDocuments/{id}/state	Publishes the contract line items document (CLID) associated with a contract workspace (procurement).	Publishing Contract Line Items Document by Using the Contract Line Items Document Publish API
Project Management API	GET /projects/projectId/teams	Returns a list of groups associated with a project.	Retrieving Project Team Details by Using the Sourcing Project Management API
	GET /projects/projectId/teams/teamID	Returns a list of users and global or system groups associated with a project group.	Adding Users in a Project Group by Using the Sourcing Project Management API
	POST /projects/projectId/teams/teamID/users	Adds users to a project group.	
	GET /projects/{projectId}	Retrieve details (also referred to as header fields), such as actualSavingPct , allowedTasks , baseLineSpend and other information about the sourcing project associated with a specified project ID.	Retrieving Details of a Specified Sourcing Project by Using the Sourcing Project Management API
Master Data Retrieval API for Sourcing	GET /entityTypes	Retrieves a list of all available master data entities in a site. The locale and realm for which master data needs to be retrieved are passed as header parameters.	Retrieving Master Data Using Master Data Retrieval API for Sourcing
	GET /entityTypes/{EntityName}	Retrieves the metadata of the specified master data entity. It returns a JSON schema representing the metadata of the entity.	
	GET /entities/{EntityName}	Retrieves details related to the specified master data entity.	

📌 Note

For rate limits applicable for the APIs listed in the table, see [API rate limit for SAP Ariba Contracts integration with Icertis Contract Intelligence for SAP Ariba solutions](#) 📄.

Prerequisites for Icertis Contract Intelligence (ICI)

For information about the prerequisites to fulfill in ICI, see [ICI for SAP Ariba: Prerequisites](#) .

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

Restrictions for the SAP Ariba Contracts Integration with Icertis Contract Intelligence for SAP Ariba Solutions

The following restrictions apply to a contract workspace (procurement) when SAP Ariba Contracts is integrated with Icertis Contract Intelligence (ICI) for SAP Ariba solutions.

- As a template administrator, while working on a contract workspace (procurement) template, you **cannot**:
 - Upload a Main Agreement or a contract addendum document to the template.
 - Create a new review or negotiation task in the template.
 - Apply conditions, either manually or using the **Condition Mapping** feature to mass-apply conditions to a Main Agreement, contract addendum documents, clauses, or folders in the template.
- As a buyer user, while working on a contract workspace (procurement) from the UI, you **cannot**:
 - Create a new review or negotiation task for a Main Agreement, contract addendum document, or a folder.
 - Configure the contract workspace to self-start new review and negotiation tasks for a Main Agreement, contract addendum, or folders.
- Outline view is not supported for Main Agreement and contract addendum documents uploaded to a contract workspace (procurement).

Note

When SAP Ariba Contracts is integrated with ICI, the Main Agreement and contract addendum documents in contract workspaces are processed in ICI and not in SAP Ariba Contracts. Therefore, if you choose to turn off the integration between SAP Ariba Contracts and ICI, the Main Agreement and contract addendum documents which were not processed by SAP Ariba Contracts will not be shown in the outline view.

- If you have opted for an integration with ICI to manage all the contract lifecycle tasks in ICI, then:
 - In the **Create** menu and the **Common Actions** section on the dashboard, all options to create contract workspaces and contract requests, except **Contract Workspace (Procurement)**, are unavailable.
 - In the **Overview** section of a contract workspace:
 - The option  **Actions**  is unavailable.
 - When you select  **Actions** , the options to choose contract workspaces or contract requests as follow-on projects are unavailable.
 - In the **Documents** section of the contract workspace, when you select  **Actions** , the options to choose contract workspaces or contract requests as subprojects are unavailable.

Setting up Integration Between SAP Ariba Contracts and Icertis Contract Intelligence for SAP Ariba Solutions

The following topics describe the configurations to be performed in SAP Ariba Contracts and Icertis Contract Intelligence for SAP Ariba solutions as part of the integration process.

[Setting Up SAP Ariba Contracts for Integrating with Icertis Contract Intelligence for SAP Ariba Solutions \[page 13\]](#)

[Setting Up Icertis Contract Intelligence for SAP Ariba Solutions for Integrating with SAP Ariba Contracts \[page 15\]](#)

Setting Up SAP Ariba Contracts for Integrating with Icertis Contract Intelligence for SAP Ariba Solutions

Use this procedure to set up SAP Ariba Contracts for integrating with Icertis Contract Intelligence (ICI) for SAP Ariba Solutions.

Context

To setup SAP Ariba Contracts for integrating with ICI, a member of the **Customer Administrator** group must configure the required parameters as outlined in the following procedure.

If you are integrating with ICI to manage **all** the contract lifecycle tasks in ICI, then your SAP Ariba Contracts instance must be integrated with SAP Ariba Sourcing.

Procedure

Enable the following parameters in SAP Ariba Contracts:

Enable SAP Ariba Contracts integration and contract data sharing with Icertis (Application.ACM.IcertisIntegration)

For more information about this parameter, refer to [Enable SAP Ariba Contracts integration and contract data sharing with Icertis](#).

Specify the hostname of the Icertis system
(`Application.ACM.IcertisHostname`)

For more information about this parameter, refer to [Specify the hostname of the Icertis system](#).

Specify the Identity service Provider (IdP) of the Icertis system
(`Application.ACM.IcertisIdPSelection`)

For more information about this parameter, refer to [Specify the Identity service Provider \(IdP\) of the Icertis system](#).

Update LastModified date when contract status changes
(`Application.ACM.UpdateLastModifiedDateOnContractStatusChange`)

For more information about this parameter, refer to [Update LastModified date when contract status changes](#).

The configuration of the following parameters is optional.

Enable the Field Integrated System Line Number in CLID
(`Application.ACM.IntegratedSystemRefLineNumberAtLineLevel`)

For more information about this parameter, refer to [Enable the Field Integrated System Line Number in CLID](#).

Note

- **Integrated System Line Number** is a read-only field in SAP Ariba Contracts.
- When you do an Excel-based export or import, ensure that the SAP Ariba-generated Item Number field has the same value in both the Contract Item Information tab and in the Item Attributes tab of the Excel workbook.
- You must include the **Integrated System Line Number** column in the Excel file that you use for data import only if you have enabled the **Enable the Field Integrated**

System Line Number in CLID

(Application.ACM.IntegratedSystemRefLineNumberOfLineLevel) ICM parameter. If you add the **Integrated System Line Number** column when the parameter is disabled, that would be considered as a custom field and might lead to unintended results.

Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions (Application.ACM.ManageContractsInIcertis)

For more information about this parameter, refer to [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).

Note

Configure this parameter only if you want to integrate with ICI to manage all the contract lifecycle tasks in ICI.

Next Steps

Set up the Icertis Contract Intelligence platform for integrating with SAP Ariba Contracts.

Setting Up Icertis Contract Intelligence for SAP Ariba Solutions for Integrating with SAP Ariba Contracts

Contact your Icertis Contract Intelligence (ICI) implementation team to complete the configuration of the **ICI for SAP Ariba** adapter.

Business Process Workflows Supported with the SAP Ariba Contracts and Icertis Contract Intelligence for SAP Ariba Solutions Integration

The following topics describe the workflows for the standard business process scenarios that involve a collaboration between SAP Ariba Contracts and Icertis Contract Intelligence (ICI) for SAP Ariba Solutions.

Note

These business process workflows are applicable only if you have chosen to integrate SAP Ariba Contracts with ICI to perform specific tasks in ICI such as contract assembly and authoring, clause and template management, redlining, and so on.

[Main Agreement Uploaded in SAP Ariba Contracts and Executed in ICI \[page 16\]](#)

[Main Agreement Authored and Executed in ICI \[page 20\]](#)

Main Agreement Uploaded in SAP Ariba Contracts and Executed in ICI

The following topics describe the business process workflows where a contract workspace (procurement) may or may not contain a draft Main Agreement document. The review and negotiations on the Main Agreement document are performed externally and the signed Main Agreement document is attached with the contract workspace for reference.

[Executing a Contract Workspace Containing a Main Agreement Document with a Signature Task \[page 16\]](#)

[Executing a Contract Workspace Containing a Main Agreement Without a Signature Task \[page 18\]](#)

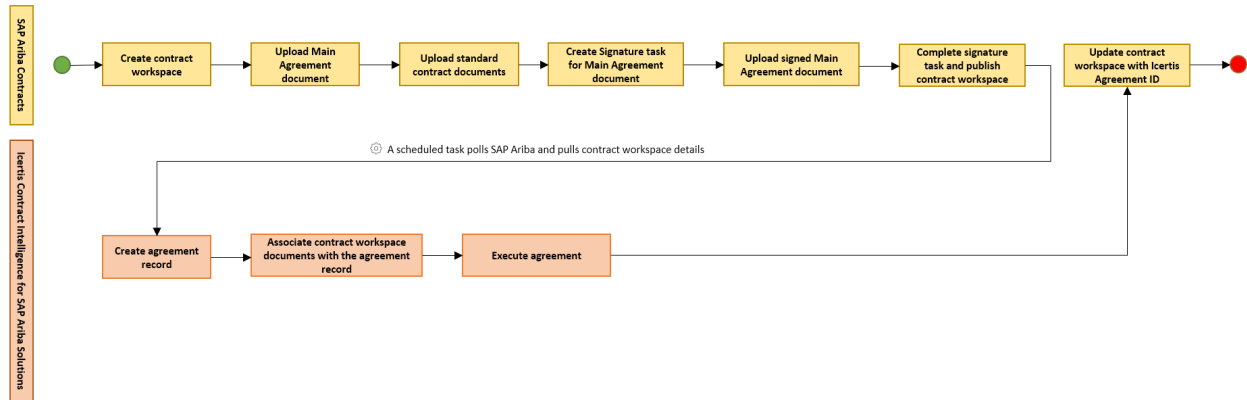

[Executing a Contract Workspace Without a Main Agreement Document \[page 19\]](#)

Executing a Contract Workspace Containing a Main Agreement Document with a Signature Task

This business process workflow describes how an SAP Ariba Contracts contract workspace containing a Main Agreement document with a signature task is processed in ICI.

This business process involves a contract workspace (procurement) that:

- Contains a draft Main Agreement document.
- Has a signature task configured for the Main Agreement document.
- May or may not contain other contract-related documents.

The key steps in this business process are outlined below.

1. Buyer user creates a contract workspace (procurement) in SAP Ariba Contracts. For information about creating a contract workspace (procurement), see [Creating Contract Projects](#).
2. Buyer user uploads a draft Main Agreement document and other contract-related documents (optional) in SAP Ariba Contracts. For more information about loading contract documents, see [Loading Assembled Contract Documents](#).
3. Buyer user creates a signature task for the draft Main Agreement document. For more information about creating signature tasks, see [Creating Signature Tasks](#).
4. The team member added as a signer to the signature task manually uploads a non-assembled, signed copy of the Main Agreement document to the contract workspace.
5. Buyer user publishes the contract workspace.
6. A scheduled task on the ICI platform polls SAP Ariba Contracts at the preconfigured interval to fetch details of the contract workspaces created or updated since its last run. In this case, ICI creates an agreement record and associates all the documents in the contract workspace with the agreement record as supporting documents. The signed version of the Main Agreement document is considered as the actual agreement document in ICI.

Note

For information about the contract workspace details that are fetched by the scheduled task, refer to the **Contract Workspace Information Sent from SAP Ariba Contracts to Icertis Contract Intelligence (ICI) for SAP Ariba Solutions** section in [Appendix \[page 50\]](#).

7. ICI executes the agreement and updates the contract workspace with the executed documents along with other details such as the Icertis Agreement ID, Agreement type, Agreement status, and so on. These details are populated under the **Integrated Systems** section of the contract workspace in SAP Ariba Contracts. Alternatively, the field **Icertis ID** located at the top right corner of the contract workspace displays the Icertis Agreement ID at all times, when available. For information about how to verify the agreement record created in ICI, see [ICI for SAP Ariba: Creating a Contract Using Executed Paper](#).

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

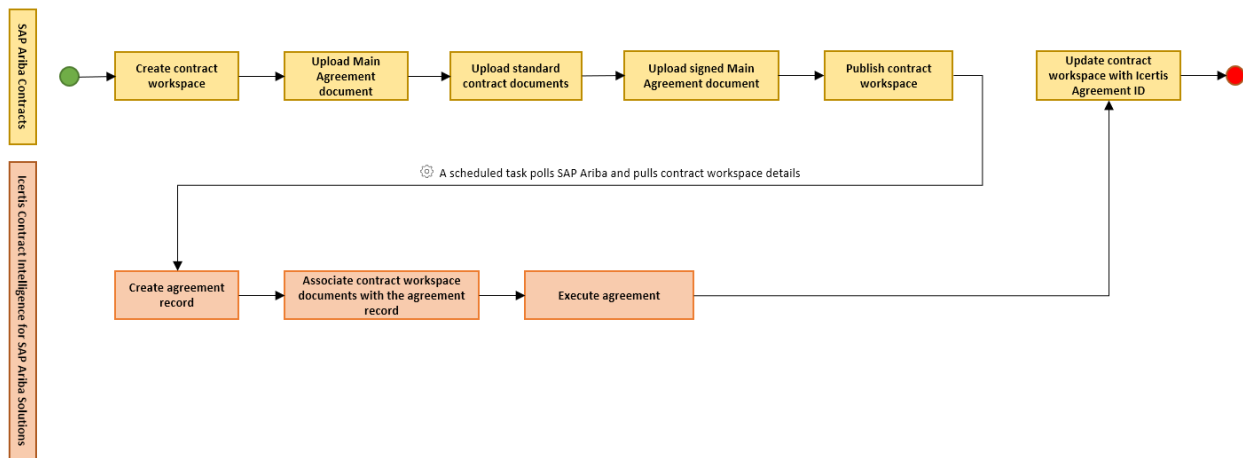

8. (Optional) Buyer users can choose to amend the contract workspace and republish it after making the required changes. In this case, the scheduled task on the ICI platform pulls the contract workspace details and updates the corresponding agreement record.

Executing a Contract Workspace Containing a Main Agreement Without a Signature Task

This business process workflow describes how an SAP Ariba Contracts contract workspace containing a Main Agreement document without a signature task is processed in ICI.

This business process involves a contract workspace (procurement) that:

- Contains a draft Main Agreement document.
- Doesn't have a signature task configured for the Main Agreement document.
- May or may not contain other contract-related documents.

The key steps in this business process are outlined below.

1. Buyer user creates a contract workspace (procurement) in SAP Ariba Contracts. For information about creating a contract workspace (procurement), see [Creating Contract Projects](#).
2. Buyer user uploads a draft Main Agreement document and other contract-related documents in SAP Ariba Contracts. For more information about loading contract documents, see [Loading Assembled Contract Documents](#).
3. The team member added as a signer to the signature task manually uploads a non-assembled, signed copy of the Main Agreement document to the contract workspace as a standard contract document.
4. Buyer user publishes the contract workspace.
5. A scheduled task on the ICI platform polls SAP Ariba Contracts at the preconfigured interval to fetch details of the contract workspaces created or updated since its last run. In this case, ICI creates an agreement record and associates all the documents in the contract workspace, including the signed copy of the Main Agreement document with the agreement record as supporting documents. The draft Main Agreement document that the buyer user uploaded to the contract workspace is considered as the actual contract agreement document in ICI.

Note

For information about the contract workspace details that are fetched by the scheduled task, refer to the **Contract Workspace Information Sent from SAP Ariba Contracts to Icertis Contract Intelligence (ICI) for SAP Ariba Solutions** section in [Appendix \[page 50\]](#).

6. ICI executes the agreement and updates the contract workspace with the executed documents along with other details such as the Icertis Agreement ID, Agreement type, Agreement status, and so on. These details

are populated under the **Integrated Systems** section of the contract workspace in SAP Ariba Contracts. Alternatively, the field **Icertis ID** located at the top right corner of the contract workspace displays the Icertis Agreement ID at all times, when available. For information about how to verify the agreement record created in ICI, see [ICI for SAP Ariba: Creating a Contract Using Executed Paper](#) .

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

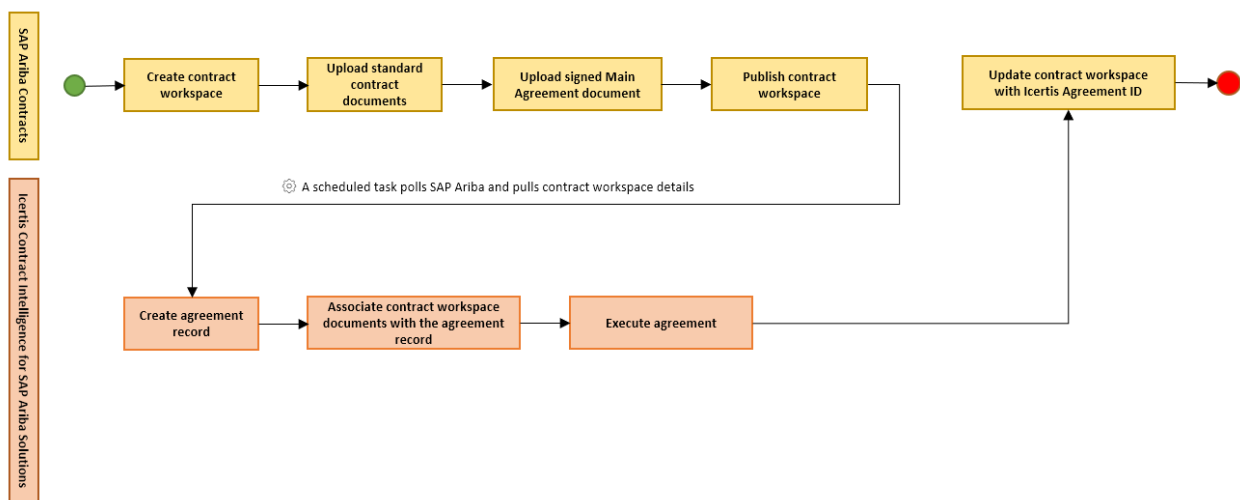

- (Optional) Buyer users can choose to amend the contract workspace and republish it after making the required changes. In this case, the scheduled task on the ICI platform pulls the contract workspace details and updates the corresponding agreement record.

Executing a Contract Workspace Without a Main Agreement Document

This business process workflow describes how an SAP Ariba Contracts contract workspace that doesn't contain a Main Agreement document is processed in ICI.

This business process involves a contract workspace (procurement) that:

- Doesn't contain a draft Main Agreement document.
- May or may not contain other contract-related documents.

The key steps in this business process are outlined below.

- Buyer user creates a contract workspace (procurement) in SAP Ariba Contracts. For information about creating a contract workspace (procurement), see [Creating Contract Projects](#).
- Buyer user uploads standard project documents (other than the Main Agreement document) in SAP Ariba Contracts. For more information about uploading contract documents, see [Loading Assembled Contract Documents](#).
- A participant manually uploads a signed version of the Main Agreement document to the contract workspace as a standard contract document.

- Buyer user publishes the contract workspace.
- A scheduled task on the ICI platform polls SAP Ariba Contracts at the preconfigured interval to fetch details of the contract workspaces created or updated since its last run. In this case, ICI creates an agreement record, attaches a dummy Main Agreement document with the agreement record, and considers it as the actual contract agreement document. ICI also associates all the documents in the contract workspace, including the signed Main Agreement document with the agreement record as supporting documents.

Note

For information about the contract workspace details that are fetched by the scheduled task, refer to the **Contract Workspace Information Sent from SAP Ariba Contracts to Icertis Contract Intelligence (ICI) for SAP Ariba Solutions** section in [Appendix \[page 50\]](#).

- ICI executes the agreement and updates the contract workspace with the executed documents along with other details such as the Icertis Agreement ID, Agreement type, Agreement status, and so on. These details are populated under the **Integrated Systems** section of the contract workspace in SAP Ariba Contracts. Alternatively, the field **Icertis ID** located at the top right corner of the contract workspace displays the Icertis Agreement ID at all times, when available. For information about how to verify the agreement record created in ICI, see [ICI for SAP Ariba: Creating a Contract Using Executed Paper](#).

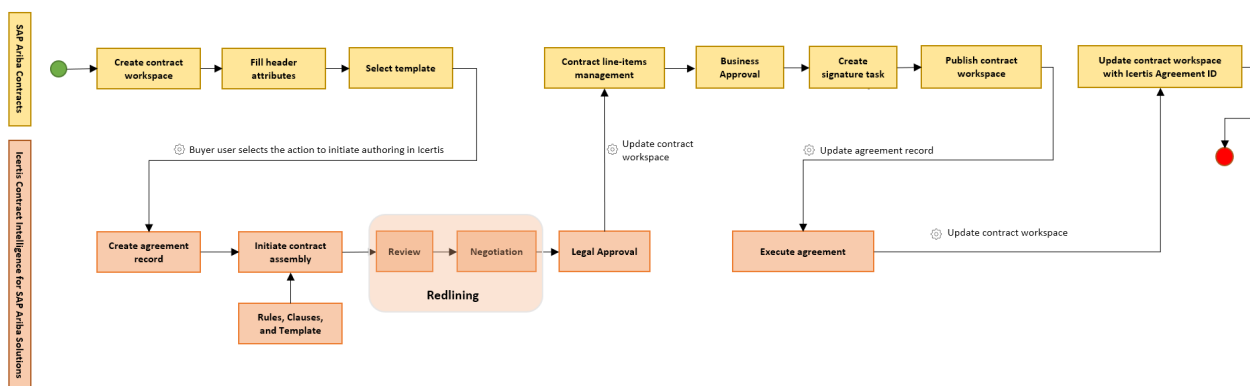

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

- (Optional) Buyer users can choose to amend the contract workspace and republish it after making the required changes. In this case, the scheduled task on the ICI platform pulls the contract workspace details and updates the corresponding agreement record.

Main Agreement Authored and Executed in ICI

This business process workflow describes how the authoring and execution of an SAP Ariba Contracts contract workspace can be performed in ICI.

The key steps in this business process are outlined below.

- Buyer user creates a contract workspace (procurement) in SAP Ariba Contracts. For information about creating a contract workspace (procurement), see [Creating Contract Projects](#).

2. Buyer user chooses to initiate contract document authoring in ICI platform. For more information about how initiate authoring in ICI from a contract workspace, see [Creating Contract Documents in Icertis Contract Intelligence \(ICI\) for SAP Ariba Solutions Interface \[page 25\]](#).
3. Buyer user is redirected to the ICI platform and the agreement record creation process is initiated. For more information about the steps that are performed in ICI, see [ICI for SAP Ariba: Creating a Contract Using Own Paper or Third party Paper](#) 📄

📌 Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

4. ICI automatically begins the contract document assembly using the required template, rules, and clauses.
5. Buyer user reviews the assembled Main Agreement document and shares it with the required team members for review.
6. After the negotiations are completed between the buyer user and the preferred suppliers, the Main Agreement document is sent for a legal approval from ICI.
7. After receiving a legal approval, ICI updates the contract workspace in SAP Ariba Contracts.
8. Buyer user reviews the contract line-items in the contract workspace. For information about how CLID changes are synchronized in ICI, see [ICI for SAP Ariba: Syncing Contract Line Item Documents \(CLID\)](#) 📄.
9. Buyer user creates a signature task is created for the Main Agreement document in SAP Ariba Contracts. For more information about creating signature tasks, see [Creating Signature Tasks](#).
10. The team member added as a signer to the signature task manually uploads a non-assembled, signed copy of the Main Agreement document to the contract workspace.
11. Buyer user publishes the contract workspace.
12. A scheduled task preconfigured to run at regular interval on the ICI platform polls SAP Ariba Contracts to fetch details of the contract workspace and updates the corresponding agreement record.

📌 Note

For information about the contract workspace details that are fetched by the scheduled task, refer to the **Contract Workspace Information Sent from SAP Ariba Contracts to Icertis Contract Intelligence (ICI) for SAP Ariba Solutions** section in [Appendix \[page 50\]](#).

13. ICI executes the agreement and sends the executed documents to SAP Ariba Contracts along with other details such as the Icertis Agreement ID, Agreement type, Agreement status, and so on.
14. Buyer user can choose to amend the contract workspace for updating the contract documents in ICI. For more information about how to amend a contract workspace and modify contract documents in ICI, see [Amending Contract Documents Using Icertis Contract Intelligence \(ICI\) for SAP Ariba Solutions Interface \[page 27\]](#).

Migrating and Mapping Contract Workspaces to SAP Ariba Contracts and Icertis Contract Intelligence for SAP Ariba Solutions

Use this procedure to migrate legacy (or existing) contract workspaces and agreements between SAP Ariba Contracts and Icertis Contract Intelligence (ICI) for SAP Ariba solutions or from third-party applications to SAP Ariba Contracts and ICI.

Prerequisites

- You must be part of a group with the **Bulk Contract Administrator** group membership.
- Ensure that the contract workspace templates are created in SAP Ariba Contracts with all the required fields.
- Work with the ICI implementation team to ensure that the ICI Contract Type and the template ID of the ACW Templates are mapped. For more information, refer to [Agreement contract type migration scenarios](#) .

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

- Work with your ICI implementation team to download the empty workbook from ICI and populate the following data:
 - Header details
 - Lines
 - Documents
 - TeamsFor more information, refer to [Agreement contract type migration scenarios](#) .

Context

You can migrate contract workspaces:

- From an external system to SAP Ariba Contracts and ICI.
- From SAP Ariba Contracts to SAP Ariba Contract Intelligence by Icertis.

You can establish a mapping between the contract records in ICI and SAP Ariba Contracts by using the `IntegratedSystemReference.csv` file. After you complete the migration steps, you can seamlessly navigate between the applications and manage contracts by using either of the integrated systems.

Procedure

1. Prepare for data migration:

- **Contract workspace migration from an external system to SAP Ariba Contracts and ICI:**

To migrate contracts from an external system to SAP Ariba Contracts and ICI, perform the following steps:

1. Create or import contract workspaces and documents into SAP Ariba Contracts.
 - Import workspace header details along with CLID documents, if any using the legacy import utility.

ⓘ Note

It is recommended to import at most 500 contract workspaces at a time using the legacy import utility.

ⓘ Note

If you want to search for a contract workspace (procurement) while the migration process is ongoing in the background, you must wait for the ongoing process to be completed for the workspaces to be searchable.

For more information about legacy contract import, see [Importing Legacy Contracts](#).

- Import documents such as Main Agreements, Contract Addendums, and Standard Documents using the bulk import utility.

For more information about the bulk upload, see [About Bulk Creation and Management of Contract Workspaces](#).

ⓘ Note

If there are parent-child linkages between the contracts, you must associate the parent contract with the child contract while uploading contracts in SAP Ariba. Parent contracts will be created as master agreements and child contracts as sub-agreements in SAP Ariba.

2. Export contract workspace details from SAP Ariba Contracts.

For more information about contract workspace export, see [Manually Exporting Contract Header Data Using File Transfers](#).

The exported file contains **Contract ID** and **Internal ID** along with other details, which are later imported into ICI for establishing a mapping between the SAP Ariba Contracts and ICI systems.

ⓘ Note

You can get the **Filename** and **Main agreement document ID** by using the Project Document Management Retrieval API.

For more information, refer to [Identifying and Downloading Project Documents by Using the Project Document Management API](#).

- **Contract workspace migration from SAP Ariba Contracts to ICI:**

To migrate contract workspaces from SAP Ariba Contracts to SAP Ariba Contract Intelligence by Icertis, export the contract workspace data along with all documents using the SAP Ariba Integration Tool Kit (ITK).

Note

It is recommended to export at most 500 contract workspaces simultaneously while exporting contract workspaces using the ITK feature.

For more information about contract workspace export using ITK, see [Contract Workspace Export Data](#).

2. Work with your ICI implementation team to complete the following steps:
 1. Import Agreement into ICI by using the workbook in which you have populated data (such as header details, lines, documents, and teams).
 2. Export the CSV file from ICI that contains the details such as *ContractId*, *IntegratedSystemName*, *Type*, *IntegratedSystemID*, *Status*, and *URLdata*.

For more information, refer to the [Agreement contract type migration scenarios](#) .

Note

To access the ICI Help Center, click the help (?) icon at the top-right corner of the ICI user interface (version 8.3 or later). Note that you must allow pop-ups on the ICI web application to access Help Center.

3. Import the `IntegratedSystemReference.csv` file (that you exported in the previous step) in SAP Ariba Contracts:
 1. Sign in as a **Bulk Contract Administrator** user.
 2. Click **Manage > Administration** .
 3. Under **Project Manager**, click **Bulk Create/Update Contracts**.
 4. In the **Bulk Create/Update Contracts** page:
 1. Enter a name for the upload operation.
 2. Optionally, enter a description for the upload.
 3. Browse your computer for the .zip file that contains `IntegratedSystemReference.csv` and upload it by clicking the **Import** button.

The `IntegratedSystemReference.csv` file includes the following details:

- **ContractId**: Specifies the Ariba contract workspace ID.
- **IntegratedSystemName**: Specifies the name of the integrated system.
- **Type**: Specifies the type of document. Possible values: Agreement, Amendment.
- **IntegratedSystemID**: Specifies the document ID in the integrated system.
- **Status**: Specifies the status of the agreement in ICI.
- **URLdata**: Specifies the data required for generating the URL for the system to which mapping needs to be done.

Example: `contractTypeName=ICMND&agreementId=385fc327-ad54-4875-889c-79eb7b2e591d`
where,

- `contractTypeName`=Entity name
- `agreementId`=Unique ID of the Icertis agreement

Results

The status of the imported .zip file, along with the name and description, if any, of the upload, is displayed in the **Bulk Import Contracts Status** page. You can click the **View Details** link next to a file to open the **Details of Bulk Contracts Import** page and view the details of the bulk import operation.

The contract record mapping details are reflected in the **Integrated Systems** section in the respective contract workspace. To verify the mapping details, in the **Contract Workspace (Procurement)** page, in the **Overview** tab, go to the **Integrated Systems** section and view the following information:

- **System Name:** The integrated system name is displayed. For example, Icertis.
- **Type:** The type of document in the external system is displayed. Possible values: Agreement, Amendment.
- **External ID:** The Agreement ID of the integrated system is displayed as a hyperlink. Click the hyperlink to navigate to the agreement in Icertis.
- **Status:** The status of the Icertis agreement.

Creating Contract Documents in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions Interface

Use this procedure to create contract documents in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions Interface.

Prerequisites

- Ensure that your site administrator has enabled the following parameters in SAP Ariba Contracts:
 - **Application.ACM.IcertisIntegration**
For more information about this parameter, see [Enable SAP Ariba Contracts integration and contract data sharing with Icertis](#).
 - **Application.ACM.IcertisHostname**
For more information about this parameter, see [Specify the hostname of the Icertis system](#).
 - **Application.ACM.IcertisIdPSelection**
For more information about this parameter, see [Specify the Identity service Provider \(IdP\) of the Icertis system](#).
 - **Application.ACM.UpdateLastModifiedDateOnContractStatusChange**
For more information about this parameter, see [Update LastModified date when contract status changes](#).
- Ensure that your site administrator creates contract workspace (procurement) templates with the **ICI Users** group added to it. This provides a placeholder to add Icertis stakeholders associated with an agreement to the contract workspace. These templates must be mapped to Icertis contract types. Icertis polls only those contract workspaces that are created with the templates having proper mapping.
- You must be the contract owner (Primary Owner) or a user who has been granted permission by the contract owner (Secondary Owner) to access the Icertis interface.

Context

With SAP Ariba Contracts integrated with ICI, you can assemble, review, negotiate, and approve contract-related documents directly in ICI.

Procedure

1. Create an SAP Ariba contract workspace (procurement) as described in [Creating Contract Workspaces from Procurement Workspaces](#).
2. Click ► **Actions** ► **Initiate Authoring** ► in the **Documents** section.

For information about the contract workspace details that are passed from SAP Ariba Contracts to Icertis, refer to the **Contract Workspace Information Sent from SAP Ariba Contracts to Icertis Contract Intelligence (ICI) for SAP Ariba Solutions** section in [Appendix \[page 50\]](#).

You are redirected to Icertis where you can assemble, review, and approve your contract document. You can also optionally sign your document in Icertis. For more information, refer to [Creating Agreements in ICI](#) ➤ .

Note

To access the Icertis Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the Icertis user interface (version 8.3 or later). You must also allow pop-ups on the Icertis web application.

3. **Optional:** Use the **ARIBA CW LINK** present in the **Ariba Information** section of the Icertis interface to navigate back to SAP Ariba Contracts.

In SAP Ariba Contracts, you can view the **External ID** link in the **Integrated Systems** table. The **Type** value will be **Agreement**. Alternatively, the field **Icertis ID** located at the top right corner of the contract workspace displays the Icertis Agreement ID at all times, when available.

Note

The **Integrated Systems** table also contains information about the contract document amendment with **Type** value as **Amendment**.

4. The executed contract document is available in the **Documents** tab of the contract workspace.

Related Information

[Publishing Contract Workspaces](#)

Amending Contract Documents Using Icertis Contract Intelligence (ICI) for SAP Ariba Solutions Interface

Use this procedure to amend contract documents in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions.

Prerequisites

- Ensure that your site administrator has enabled the following parameters in SAP Ariba Contracts:
 - **Application.ACM.IcertisIntegration**
For more information about this parameter, see [Enable SAP Ariba Contracts integration and contract data sharing with Icertis](#).
 - **Application.ACM.IcertisHostname**
For more information about this parameter, see [Specify the hostname of the Icertis system](#).
 - **Application.ACM.IcertisIdPSelection**
For more information about this parameter, see [Specify the Identity service Provider \(IdP\) of the Icertis system](#).
 - **Application.ACM.UpdateLastModifiedDateOnContractStatusChange**
For more information about this parameter, see [Update LastModified date when contract status changes](#).
- You can only amend an SAP Ariba contract workspace that is in a **Published** state.

Context

With SAP Ariba Contracts integrated with ICI, you can update contract documents in Icertis by amending a published contract workspace in SAP Ariba Contracts.

Procedure

1. Open the published contract workspace that you want to amend.
2. In the **Contract Attributes** section of the **Overview** tab, choose **Actions** ► **Amend** .
3. Select **Amendment Type** as Amendment.
4. Add an **Amendment Reason**.
5. Click **OK**.
A new version of the contract workspace is created. The status of the contract workspace is set to **Draft Amendment**.
6. To amend a contract document, select **Actions** ► **Initiate Authoring** in the **Documents** section.
For more information about working with amendment in Icertis, see [ICI for SAP Ariba: Working with Amendments](#) .

Note

To access the Icertis Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the Icertis user interface (version 8.3 or later). You must also allow pop-ups on the Icertis web application.

7. **Optional:** Use the **ARIBA CW LINK** present in the **Ariba Information** section of the ICI interface to navigate back to SAP Ariba Contracts.

You can view the newly created amendment details (**System Name**, **Type**, **External ID**, and **Status**) in the **Integrated Systems** table of the contract workspace. The **Type** value will be **Amendment**.

Note

- The amendment details in the **Integrated Systems** table are updated with the most recent amendment action.
- The **Integrated Systems** table also contains information about the contract document creation. The contract document creation entry has the **Type** value as **Agreement**.

8. **Optional:** Navigate to the **Contract Attributes** section of the **Overview** tab and choose ► **Actions** ► **Publish** ► to publish the amendment.

Accessing Icertis Agreements While Selecting a Contract to Add Line Items from Sourcing Awards

Use this procedure to access the Icertis agreement information for a contract workspace (procurement) while awarding line items in sourcing events to an existing contract from the SAP Ariba Sourcing classic user interface.

Prerequisites

- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your administrator must enable the **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (`Application.ACM.ManageContractsInIcertis`) ICM parameter. For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
- You must be a member of a group that has permission to create a contract workspace (procurement), such as the **Contract Manager** group.
- If the sourcing event from which you want to create the contract is initiated by an RFQ from an external system and contains service outline attributes, ensure that you

have enabled the **Enable Export of Service Outline Attributes from Sourcing to Contract** (`Application.ACM.ExportOutlineAttributesFromSourcingToContract`) parameter. For more information about the parameter, see [Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts](#).

Context

Buyers can choose to award line items from their sourcing event to a supplier with whom they have an existing contract. While choosing the contract to add line items, they can access additional information for a contract workspace (procurement) which has an **Icertis ID**. To review the Icertis agreement details in ICI, buyers can click the **Icertis ID** of the contract workspace (procurement).

Procedure

1. On the **Award** tab, choose **Contract > Add to Existing Contract**.
2. On the **Add to Existing Contract** page, select the supplier.
3. Click **Add to Existing Contract**.

The **Update or Replace existing contract** page appears.

4. Select an option to view contracts for the selected supplier, for all suppliers, or contracts that have no supplier information by clicking the radio button against the **View Contracts available for Supplier** field.

You can also enter the **Contract Title** and click **Search**.

The matching contracts are shown in a table under the **Available Contracts** section.

Alternatively, you can click **Advanced Search**. Enter the **Contract Title**, **ID**, or **any other term** in the **Search Filter** and click **Search**.

The matching contracts is displayed in a table under the **Search Results**.

5. Click the Icertis ID of a contract workspace (procurement) to access the agreement details on the ICI site.

The **Icertis ID** is shown only for contract workspace (procurement) records that are in the **Published** or **Draft Amendment** state.

For all other contract types, the value **Not Applicable** is shown under the **Icertis ID** column.

Accessing Icertis Agreements in Guided Sourcing While Selecting a Contract to Add Line Items from Sourcing Awards

Use this procedure to access the Icertis agreement information for a contract workspace (procurement) while awarding line items in sourcing events to an existing contract from the SAP Ariba Sourcing guided user interface.

Prerequisites

- Your site must have guided sourcing enabled and you must be a member of the **Category Buyer** group. For more information, see [Setting Up Guided Sourcing](#).
- You must be the event owner or have project owner capabilities for the event.
- You have an award for a guided sourcing event.
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your administrator must enable the **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (`Application.ACM.ManageContractsInIcertis`) ICM parameter. For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
- You must be a member of a group that has permission to create a contract workspace (procurement), such as the **Contract Manager** group.
- If the sourcing event from which you want to create the contract is initiated by an RFQ from an external system and contains service outline attributes, ensure that you have enabled the **Enable Export of Service Outline Attributes from Sourcing to Contract** (`Application.ACM.ExportOutlineAttributesFromSourcingToContract`) parameter. For more information about the parameter, see [Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts](#).

Context

Buyers can choose to award line items from their sourcing event to a supplier with whom they have an existing contract. While choosing the contract to add line items, they can access additional information for a contract workspace (procurement) which has an **Icertis ID**. To review the Icertis agreement details in ICI, buyers can click the **Icertis ID** of the contract workspace (procurement).

Procedure

1. In the monitor page of the guided sourcing event, select the **Award** tab.
2. In the **Award** > **Award scenarios** > **Scenario Maker** tab, locate the awarded supplier and click the more actions icon (⋮) that appears next to the name of the awarded supplier.

3. Select **Add awarded items to an existing contract**.

The **Update or Replace existing Contracts** page appears.

4. Select an option to view contracts for the selected supplier, for all suppliers, or contracts that have no supplier information by clicking the radio button against the **View Contracts available for Supplier** field.

You can also enter the **Contract Title** and click **Search**.

The matching contracts are shown in a table under the **Available Contracts** section.

5. Click the Icertis ID of a contract workspace (procurement) to access the agreement details on the ICI site.

The **Icertis ID** is shown only for contract workspace (procurement) records that are in the **Published** or **Draft Amendment** state.

For all other contract types, the value **Not Applicable** is shown under the **Icertis ID** column.

Deleting or Deactivating Line Items in a Contract Line Items Document Using Excel Import

Use this procedure to delete or deactivate line items in a Contract Line Items Document (CLID) using the Excel Import functionality.

Prerequisites

- Your administrator must enable the **Allow Line Item Deletion Through Excel Import** (Application.ACM.AllowLineItemDeletionThroughExcelImport) ICM parameter. For information about this parameter, see [Allow Deleting Line Items Through Excel Import](#).
- You must have at least one line item in the CLID that you want to modify.
- (Optional) Your site must have SAP Ariba Contracts integrated with ICI. For information about integrating SAP Ariba Contracts with ICI, see [Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions \[page 4\]](#).

Context

As a buyer, to delete or deactivate line items present in the CLID of a contract workspace, you can create an Excel file that contains the required information and import the data using the **Excel Import** functionality.

Procedure

1. Open the contract workspace that contains the CLID you want to modify.

2. Open the CLID.

The CLID details page is displayed.

3. Edit the Excel version of the CLID to prepare the data to import.

For information about editing the Excel version of a CLID, see [Editing Excel Versions of Contract Line Items Documents](#).

In the **Contract Item Information** worksheet, enter a specific value in the **Item Status** column for the line items that you want to delete or deactivate. To delete a line item, enter **HardDeleted**. To deactivate a line item, enter **Deleted**.

Note

For hierarchical line items that have child line items, make note of the following:

Item Status (Parent Line Item)	Item Status (Child Line Item)	Result
Deleted	Deleted or no entry	The parent and child line items are deactivated.
HardDeleted	HardDeleted or no entry	The parent and child line items are deleted.
Deleted	HardDeleted	The parent line item is deactivated and child line item is deleted.
HardDeleted	Deleted	The parent and child line items are deleted.

4. Return to the **Import Content from Excel** page and select **Update Document** under **Select how you would like to import the content**.
5. Click **Choose file** and select the updated Excel file.
6. Click **Import**.

Next Steps

On the CLID details page, verify that the updates to the line items are as expected.

Note

Deleted line items are not shown in the line items table on the CLID details page. Deactivated line items are highlighted in grey in the line items table and are not editable.

Importing Deactivated Line Items From an Integrated ERP System to a Contract Workspace Using Excel Import

Use this procedure to import deactivated line items from an external integrated ERP system using the Excel Import functionality.

Prerequisites

Your administrator must enable the following ICM parameters:

- **Allow Line Item Deletion Through Excel Import**
(Application.ACM.AllowLineItemDeletionThroughExcelImport). For information about this parameter, see [Allow Deleting Line Items Through Excel Import](#).
- **Allow Importing Deactivated ERP Items Through Excel Import**
(Application.ACM.AllowDeletedERPItemsThroughCLIEExcelImport). For information about this parameter, see [Allow Importing Deactivated Line Items From an ERP System Through Excel Import](#).

Context

As a buyer, to import deactivated line items from an integrated ERP system to a contract workspace that does not contain the line items information in the associated Contracts Line Items Document (CLID), you can create an Excel file with the required details and import the data using the **Excel Import** functionality.

Procedure

1. Open the contract workspace that contains the CLID you want to modify.
2. Open the CLID.

The CLID details page is displayed.

3. Edit the Excel version of the CLID to prepare the data to import.

For information about editing the Excel version of a CLID, see [Editing Excel Versions of Contract Line Items Documents](#).

In the **Contract Item Information** worksheet, enter the line item information as recorded in the ERP system. In the **Item Status** column for each line item, enter a value as **Deleted**.

4. Return to the **Import Content from Excel** page and select **Update Document** under **Select how you would like to import the content**.
5. Click **Choose file** and select the updated Excel file.

6. Click **Import**.

Next Steps

On the CLID details page of the contract workspace, verify that the updates to the line items are as expected.

Note

Deactivated line items are highlighted in grey in the line items table and are not editable.

Creating an Agreement in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event

Use this procedure to create an agreement in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions from a guided sourcing event.

Prerequisites

- Your site must have guided sourcing enabled. For more information, see [Setting Up Guided Sourcing](#).
- You must be a member of the **Category Buyer** group.
- You must be the event owner or have project owner capabilities for the event.
- You must have an award for a guided sourcing event.
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your administrator must enable the **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (`Application.ACM.ManageContractsInIcertis`) ICM parameter. For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
- You must be a member of a group that has permission to create contracts, such as the **Contract Manager** group.
- If the sourcing event from which you want to create a contract is initiated by an RFQ from an external system and contains service outline attributes, ensure that you have enabled the **Enable Export of Service Outline Attributes from Sourcing to Contract** (`Application.ACM.ExportOutlineAttributesFromSourcingToContract`) parameter. For more information about the parameter, see [Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts](#).

Context

When you award line items from a guided sourcing event to a supplier, you can initiate a new contract with the supplier by choosing to create an agreement in Icertis from the guided sourcing event. The following details are copied to the Icertis agreement from the guided sourcing event:

- Event header information such as supplier, supplier address, title, value, commodity, region, company code, and purchasing organization.
- Awarded line items to be added as associations in the ICI agreement.
- Team member information.

Note

You can create an Icertis agreement from an awarded guided sourcing event of type **Single Event** (including single events added to full sourcing projects) only.

Procedure

1. On the monitor page of SAP Ariba Sourcing, go to the **Award > Award scenarios > Scenario Maker** tab.
2. Click the more actions icon (vertical three dots) that appears next to the name of the awarded supplier.
3. Select **Create a contract for awarded items**.

If contracts associated with the sourcing event exist, a popup informs you about the existing contracts. Click **Ok** to proceed with the contract creation. Another popup appears with a disclaimer message.

4. Click **Ok** on the popup.

You are redirected to the ICI user interface to create an agreement. The **Create Agreement** page appears for the first step of the agreement creation process.

5. Complete all the steps in the agreement creation process.

For information about creating an agreement in Icertis, see [Creating Agreements in ICI](#).

Note

To access the Icertis Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the Icertis user interface (version 8.3 or later). You must also allow pop-ups on the Icertis web application.

Next Steps

After the agreement is created, Icertis creates a corresponding contract workspace in SAP Ariba Contracts. The contract workspace is linked to the event in guided sourcing. The contract workspace also shows the Icertis ID associated with it. You can click the Icertis ID to view the agreement details in Icertis.

📌 Note

For information about the contract workspace details received from ICI to SAP Ariba Contracts, refer to the **Contract Workspace Information Received from Icertis Contract Intelligence (ICI) for SAP Ariba Solutions to SAP Ariba Contracts** section in [Appendix \[page 50\]](#).

Adding Awarded Line Items from a Guided Sourcing Event to an Existing Agreement in Icertis Contract Intelligence for SAP Ariba Solutions

Use this procedure to add line items from a guided sourcing event to an existing agreement in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions.

Prerequisites

- Your site must have guided sourcing enabled. For more information, see [Setting Up Guided Sourcing](#).
- You must be a member of the **Category Buyer** group.
- You must be the event owner or have project owner capabilities for the event.
- You must have an award for a guided sourcing event.
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your administrator must enable the **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (`Application.ACM.ManageContractsInIcertis`) ICM parameter. For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
- You must be a member of a group that has permission to create contracts, such as the **Contract Manager** group.
- If the sourcing event from which you want to update a contract is initiated by an RFQ from an external system and contains service outline attributes, ensure that you have enabled the **Enable Export of Service Outline Attributes from Sourcing to Contract** (`Application.ACM.ExportOutlineAttributesFromSourcingToContract`) parameter. For more information about the parameter, see [Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts](#).

Context

When you award line items from a guided sourcing event to a supplier, you can add the line items to an existing Icertis agreement for the supplier. When you choose to update an agreement, the following details are copied to it from the guided sourcing event:

- Event header information such as supplier, supplier address, title, value, commodity, region, company code, and purchasing organization.

- Awarded line items to be added as associations in the ICI agreement.
- Team member information.

Note

You can update an Icertis agreement from an awarded guided sourcing event of type **Single Event** (including single events added to full sourcing projects) only.

If you choose to update an agreement in Icertis, you can add line items to an existing agreement with the status as **Draft** or **Amendment Draft**, or amend an agreement with the status as **Executed** or **Amendment Executed**.

Procedure

1. On the monitor page of SAP Ariba Sourcing, go to the **Award** > **Award scenarios** > **Scenario Maker** tab.
2. Click the more actions icon (vertical three dots) that appears next to the name of the awarded supplier.
3. Select **Add awarded items to an existing contract**.

The **Update or Replace existing Contracts** page appears. You can choose to view the contracts for the supplier you selected, or the contracts that have no supplier specified, or the contracts for all suppliers.

4. Click **Search** to view a list of contracts available to update.

Alternatively, if you have the details of the contract to update, you can enter the **Contract Title** and click **Search**.

5. In the **Available Contracts** section, select the contract that you want to update.

Note

- The selected contract must have a valid **Icertis ID**.
- If the contract status is **Draft** or **Draft Amendment**, the corresponding Icertis agreement must have a status as **Draft** or **Amendment Draft**.
- If the contract status is **Published**, the corresponding Icertis agreement must have a status as **Executed** or **Amendment Executed**.

6. Click **Select This Contract**.

You are redirected to the Icertis user interface to update the selected agreement.

7. Complete all the steps to update the agreement.

For information about updating an agreement in Icertis, see [Editing Agreements in ICI](#) .

Note

To access the Icertis Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the Icertis user interface (version 8.3 or later). You must also allow pop-ups on the Icertis web application.

Next Steps

After updating the agreement, Icertis updates the corresponding contract workspace in SAP Ariba Contracts.

Creating an Agreement in Icertis Contract Intelligence for SAP Ariba Solutions from a Sourcing Event

Use this procedure to create an agreement in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions from a sourcing event. Use this procedure to create an agreement in SAP Ariba Contract Intelligence by Icertis from a sourcing event.

Prerequisites

- You must have an award for a sourcing event.
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your administrator must enable the **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (`Application.ACM.ManageContractsInIcertis`) ICM parameter. For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
- You must be a member of a group that has permission to create contracts, such as the **Contract Manager** group.
- If the sourcing event from which you want to create a contract is initiated by an RFQ from an external system and contains service outline attributes, ensure that you have enabled the **Enable Export of Service Outline Attributes from Sourcing to Contract** (`Application.ACM.ExportOutlineAttributesFromSourcingToContract`) parameter. For more information about the parameter, see [Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts](#).

Context

When you award line items from a sourcing event to suppliers, you can initiate a new contract with the suppliers by choosing to create an agreement in SAP Ariba Contract Intelligence by Icertis from the sourcing event. The following details are copied to the Icertis agreement from the sourcing event:

- Event header information such as supplier, supplier address, title, value, commodity, region, company code, and purchasing organization.
- Awarded line items to be added as associations in the Icertis agreement.
- Team member information.

📘 Note

You can create an Icertis agreement from an awarded sourcing event of type **Single Event** (including single events added to full sourcing projects).

Procedure

1. On the **Award** tab, choose ► **Contract** ► **Create New Contract** ►.
2. On the **Create New Contract** page, select the participant.
3. Click **Create New Contract**.

If contracts associated with the sourcing event exist, a popup informs you about the existing contracts. Click **Ok** to proceed with the contract creation. Another popup appears with a disclaimer message.

4. Click **Ok** on the popup.

You are redirected to the Icertis user interface to create a new agreement. The **Create Agreement** page appears for the first step of the agreement creation process.

5. Complete all the steps in the agreement creation process.

For information about creating an agreement in Icertis, see [Creating Agreements in ICI](#) ➔.

📘 Note

To access the Icertis Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the Icertis user interface (version 8.3 or later). You must also allow pop-ups on the Icertis web application.

Next Steps

After the agreement is created, Icertis creates a corresponding contract workspace in SAP Ariba Contracts. You can find the new contract workspace linked to the classic SAP Ariba Sourcing event.

📘 Note

For information about the contract workspace details received from Icertis to SAP Ariba Contracts, refer to the **Contract Workspace Information Received from Icertis Contract Intelligence for SAP Ariba Solutions (ICI) to SAP Ariba Contracts** section in [Appendix \[page 50\]](#).

Adding Awarded Line Items from a Sourcing Event to an Existing Agreement in Icertis Contract Intelligence for SAP Ariba Solutions

Use this procedure to add awarded line items from a sourcing event to an existing agreement in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions.

Prerequisites

- You must have an award for a sourcing event.
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your administrator must enable the **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (`Application.ACM.ManageContractsInIcertis`) ICM parameter. For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
- You must be a member of a group that has permission to create contracts, such as the **Contract Manager** group.
- If the sourcing event from which you want to update a contract is initiated by an RFQ from an external system and contains service outline attributes, ensure that you have enabled the **Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts** (`Application.ACM.ExportOutlineAttributesFromSourcingToContract`) parameter. For more information about the parameter, see [Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts](#).

Context

When you award line items from a sourcing event to a supplier, you can add the line items to an existing Icertis agreement for the supplier. When you choose to update an agreement, the following details are copied to it from the sourcing event:

- Event header information such as supplier, supplier address, title, value, commodity, region, company code, and purchasing organization.
- Awarded line items to be added as associations in the Icertis agreement.
- Team member information.

Note

You can update an Icertis agreement from an awarded sourcing event of type **Single Event** (including single events added to full sourcing projects) only.

If you choose to update an agreement in Icertis, you can add line items to an existing agreement with the status as **Draft** or **Amendment Draft**, or amend an agreement with the status as **Executed** or **Amendment Executed**.

Procedure

1. On the **Award** tab, choose ► **Contract** ► **Add to Existing Contract** ►.
2. Select the supplier.
3. Click **Add to Existing Contract**.

The **Update or Replace existing Contracts** page appears. You can choose to view the contracts for the supplier you selected, or the contracts that have no supplier specified, or the contracts for all suppliers.

4. Click **Search** to view a list of contracts available to update.

Alternatively, if you have the details of the contract to update, you can enter the **Contract Title** and click **Search**.

5. In the **Available Contracts** section, select the contract that you want to update.

Note

- The selected contract must have a valid **Icertis ID**.
- If the contract status is **Draft** or **Draft Amendment**, the corresponding Icertis agreement must have a status as **Draft** or **Amendment Draft**.
- If the contract status is **Published**, the corresponding Icertis agreement must have a status as **Executed** or **Amendment Executed**.

6. Click **Select This Contract**.

You are redirected to the ICI user interface to update the selected agreement.

7. Complete all the steps to update the agreement.

For information about updating an agreement in Icertis, see [Editing Agreements in ICI](#) ➤.

Note

To access the Icertis Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the Icertis user interface (version 8.3 or later). You must also allow pop-ups on the Icertis web application.

Next Steps

After updating the agreement, Icertis updates the corresponding contract workspace in SAP Ariba Contracts.

Creating a Baseline Contract in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event

Use this procedure to create a baseline contract in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions from a guided sourcing event set up for pre-award negotiation.

Prerequisites

- Your site must have guided sourcing enabled. For more information, see [Setting Up Guided Sourcing](#).
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your site must have SAP Ariba Contracts integrated with ICI. For information about integrating SAP Ariba Contracts with ICI, see [Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions \[page 4\]](#).
- Your administrator must enable the following ICM parameters:
 - **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (Application.ACM.ManageContractsInIcertis). For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
 - **Enable Pre-Award Negotiation In Guided Sourcing events** (Application.ACM.EnablePreAwardNegotiationInGuidedSourcing). For information about this parameter, refer to [Enable Pre-Award Negotiation In Guided Sourcing Events](#).
 - **Enable predecessor event identification for contracts created from guided sourcing projects**. This parameter enables SAP Ariba Sourcing to pass the predecessor event information, in addition to the predecessor project information, to ICI whenever applicable. For more information about this parameter, refer to [Enable predecessor event identification for contracts created from guided sourcing projects](#).

Context

A baseline contract allows you to establish agreements with suppliers prior to awarding a sourcing event. You can link a baseline contract to a sourcing event that involves pre-award negotiation. Additionally, a baseline contract can be associated with a guided sourcing event at any stage until it is awarded.

Procedure

1. Create a guided sourcing event.

For information about creating a guided sourcing event, refer to [Creating a Guided Sourcing Project or Event from a Template](#).

2. Click **⋮ (More actions)** and select **Associated Contracts**.

The **Associated Contracts** page appears. On this page, there are two sections which display information and action items related to baseline contracts and supplier contracts respectively.

3. To create a baseline contract, select **Create Baseline Contract**.

You are redirected to the ICI user interface to create an agreement. The **Create Agreement** page appears for the first step of the agreement creation process.

4. Complete all the steps in the agreement creation process.

For information about creating an agreement in ICI, see [Creating Agreements in ICI](#) .

 Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

Results

An agreement is created in ICI and a corresponding contract workspace is set up in SAP Ariba Contracts. The contract workspace in SAP Ariba Contracts serves as a read-only record, intended solely for reference, as all contract-related activities are conducted within ICI. In the **Baseline Contract** section of the guided sourcing event, you can find the following information:

Document Title	The title of the baseline contract.
Contract Status (ARIBA)	The status of the baseline contract in SAP Ariba Contracts.
Contract Status (ICERTIS)	The status of the baseline contract Icertis Contract Intelligence (ICI) for SAP Ariba Solutions.
SAP Ariba ID	The unique identifier of the baseline contract. You can click the ID to navigate to SAP Ariba Contracts and review the baseline contract.

 Note

The contract workspace is read-only.

Icertis ID	The unique identifier of the corresponding agreement created in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions. You can click the Icertis ID to view and modify the agreement details in ICI.
Effective Date	The effective date set for the baseline contract.
Expiration Date	The expiration date of the baseline contract.
Update	An option to sync the baseline contract with line item information updates from the sourcing event.

Next Steps

Continue working on the guided sourcing event, or the baseline contract, as required.

Note

- Only one active baseline contract can be linked to a sourcing event at a time. If you need to associate a new baseline contract with a sourcing event that already has an active baseline contract, you must first change the status of the existing contract to **Closed** before proceeding with the new association.
- A baseline contract is not available for sourcing awards when you choose to add awarded line items to an existing contract with a supplier.
- A baseline contract cannot be amended after it is published.

If there are changes to the line items information in the sourcing event during the course of the pre-award negotiation process, you can update the baseline contract in ICI to synchronize the line items information. For more information, refer to [Updating a Baseline Contract in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event \[page 44\]](#).

Updating a Baseline Contract in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event

Use this procedure to update a baseline contract in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions with line items information from a guided sourcing project or event.

Prerequisites

- A baseline contract must be created in ICI from a guided sourcing event and the status of the baseline contract must be **Draft**. For information about creating a baseline contract in ICI from a guided sourcing event, refer to [Creating a Baseline Contract in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event \[page 42\]](#).
- The guided sourcing project or event must not be in the **Completed** status.

Context

After creating a baseline contract with a sourcing event, if there are changes to the line items information in the sourcing event as part of the pre-award negotiation process, you can update the baseline contract in ICI to synchronize the changes.

Procedure

1. Open the guided sourcing project or event in edit mode.
2. Click **⋮ (More actions)** and select **Associated Contracts**.
3. Locate the baseline contract that you want to update in the **Baseline Contract** section and select the **Update** button.

You are redirected to the ICI user interface to update the selected agreement.

4. Review and make the required updates the agreement.

For information about updating an agreement in ICI, see [Editing Agreements in ICI](#) .

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

5. Verify that the line item information from the sourcing event matches the details displayed in the agreement.

Results

The agreement is updated in ICI. The updates are automatically synced with the corresponding contract workspace in SAP Ariba Contracts.

Creating a Supplier Contract in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event

Use this procedure to create a supplier contract in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions from a guided sourcing event set up for pre-award negotiation.

Prerequisites

- Your site must have guided sourcing enabled. For more information, see [Setting Up Guided Sourcing](#).
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- Your site must have SAP Ariba Contracts integrated with ICI. For information about integrating SAP Ariba Contracts with ICI, see [Integrating SAP Ariba Contracts with Icertis Contract Intelligence for SAP Ariba Solutions \[page 4\]](#).
- Your administrator must enable the following ICM parameters:

- **Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions** (`Application.ACM.ManageContractsInIcertis`). For information about this parameter, see [Manage Contracts in Icertis Contract Intelligence for SAP Ariba Solutions](#).
- **Enable Pre-Award Negotiation In Guided Sourcing events** (`Application.ACM.EnablePreAwardNegotiationInGuidedSourcing`). For information about this parameter, refer to [Enable Pre-Award Negotiation In Guided Sourcing Events](#).
- **Enable predecessor event identification for contracts created from guided sourcing projects.** This parameter enables SAP Ariba Sourcing to pass the predecessor event information, in addition to the predecessor project information, to ICI whenever applicable. For more information about this parameter, refer to [Enable predecessor event identification for contracts created from guided sourcing projects](#).
- The guided sourcing event must be a **Single event** type.
- The guided sourcing event must be in one of the following phases: **Published**, **Monitor**, **Pending Selection**, **Review responses**, **Open**, or **Paused**.
- The guided sourcing event must have an active baseline contract in the **Published** state. For information about associating a baseline contract with a guided sourcing event, refer to [Creating a Baseline Contract in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event \[page 42\]](#).

Context

A supplier contract is a copy of the baseline contract linked to a guided sourcing event. Buyers can create contracts for suppliers who have submitted bids for the event's line items. Additionally, buyers have the option to create supplier contracts in bulk when there are multiple suppliers involved in the event.

Procedure

1. Open the guided sourcing project or event in edit mode.
2. Click **⋮ (More actions)** and select **Associated Contracts**.
3. Under the **Supplier Contract** section, select **Create Contract** to create a supplier contract.

A dialog box **Select Suppliers for Contract Creation** appears showing all the suppliers involved in the sourcing eventb. The following information is shown for each supplier:

Supplier	The name of a supplier invited to participate in the event.
Contract ID	The ID of the existing supplier-specific contract created for a supplier.
Bid Invite Status	The response of a supplier to the bid invitation.

4. Select a supplier for whom you want to create a contract.

You can select multiple suppliers from the list.

Note

You can select only those suppliers who have submitted a bid response and who do not have an ongoing contract creation task in progress.

5. Confirm your selection.

You are redirected to the ICI user interface to create an agreement. The **Create Agreement** page appears for the first step of the agreement creation process.

6. Complete all the steps in the agreement creation process.

For information about creating an agreement in ICI, see [Creating Agreements in ICI](#) ➤.

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

Updating a Supplier Contract in Icertis Contract Intelligence for SAP Ariba Solutions from a Guided Sourcing Event

Use this procedure to update a supplier contract created in Icertis Contract Intelligence (ICI) for SAP Ariba Solutions from a guided sourcing event set up for pre-award negotiation.

Prerequisites

- The status of the guided sourcing event must be **Completed**.
- The status of the active baseline contract linked with the guided sourcing event must be **Published**.

Context

After awarding line items in a guided sourcing event, you can review the corresponding contract of the supplier to whom the line items were awarded to verify the line items information.

Procedure

1. Open the guided sourcing project or event in edit mode.
2. Click **⋮ (More actions)** and select **Associated Contracts**.
3. Locate the supplier contract that you want to update in the **Supplier Contract** section and select the **Update** button.

You are redirected to the ICI user interface to update the selected agreement.

4. Review and make the required updates the agreement.

For information about updating an agreement in ICI, see [Editing Agreements in ICI](#) ➔ .

Note

To access the ICI Help Center, authenticate yourself by clicking the help (?) icon at the top right corner of the ICI user interface (version 8.3 or later). You must also allow pop-ups on the ICI web application.

5. Verify that the line item information from the sourcing event matches the details displayed in the agreement.

Results

The agreement is updated in ICI. The updates are automatically synced with the corresponding contract workspace in SAP Ariba Contracts.

Icertis Agreement Information in Guided Sourcing Events

This topic applies to buyers who use SAP Ariba Sourcing together with SAP Ariba Contracts and who have also integrated SAP Ariba Contracts with Icertis Contracts Intelligence (ICI) for SAP Ariba Solutions.

Buyers can find information about all the contracts that are associated with a guided sourcing event. When buyers choose to manage all contract related tasks in ICI, the ICI agreement information is also shown in the guided sourcing events. The Icertis ID is displayed for SAP Ariba Contracts contract workspaces associated with a guided sourcing event, which have corresponding agreement in Icertis. Buyers can click the Icertis ID to access the agreement details on the ICI site.

In guided sourcing events that are configured for pre-award negotiation, buyers can find the Icertis ID of the agreement created in correspondence to the baseline contracts and supplier contracts associated with the guided sourcing event. For more information about pre-award negotiation in guided sourcing, refer to [Pre-Award Negotiation in Guided Sourcing](#).

[Viewing Associated Contracts for Guided Sourcing Events \[page 49\]](#)

Viewing Associated Contracts for Guided Sourcing Events

Use this procedure to view contracts associated with guided sourcing events.

Prerequisites

- Your site must have [guided sourcing enabled](#) and you must be a member of the **Category Buyer** group.
- You must be the event owner or have project owner capabilities for the event.
- You must have an award for a guided sourcing event.
- Your site must have SAP Ariba Contracts integrated with SAP Ariba Sourcing.
- You must be a member of a group that has permission to create contract workspaces, such as the **Contract Manager** group.
- If the sourcing event from which you want to create or update a contract is initiated by an RFQ from an external system and contains service outline attributes, ensure that you have enabled the **Enable Export of Service Outline Attributes from Sourcing to Contract** (`Application.ACM.ExportOutlineAttributesFromSourcingToContract`) parameter. For more information about the parameter, see [Enable Export of Service Outline Attributes from SAP Ariba Sourcing to SAP Ariba Contracts](#).

Context

As a buyer, you can get information about the contracts associated with a guided sourcing event on the **Awards** page of the event.

Procedure

1. In the monitor page of the guided sourcing event, select the **Award** tab.
2. Go to the **Associated Contracts** tab to find details of all the contracts that are associated with the guided sourcing event.

The contract information includes the following:

Contract Id

Title

Supplier

Expiration Date

Effective Date

Contract Status

Icertis ID - This column is shown only to customers who have integrated their SAP Ariba Contracts instance with Icertis Contract Intelligence for SAP Ariba Solutions.

The table displays all contracts that you create or update from the event. However, an updated contract is shown in the table only if it's not associated with any other event.

Next Steps

After reviewing the contract information, determine whether you want to create a new contract or update an existing contract for the awarded line items.

Glossary

This topic contains the terms used throughout this integration document along with their definition.

SAP Ariba Term	Description	Icertis Equivalent Term
Procurement contract workspace	A record created by the buyer user as part of a procurement project or a sourcing event. It contains all the contract-related information including documents such as the Main Agreement, contract addendums, and other project documents.	Agreement
-	It is a type of paper when creating an agreement. Own paper indicates the usage of your own template.	Own paper
-	It is a type of paper when creating an agreement. Third-party paper indicates the usage of external/ third party template.	Third-party paper
